

## Modern Computer Technology – You can't ignore it!

Modern computer technology can be frightening at first but once you understand how to use it you will find that it will make your life easier and introduce you to an exciting new world.

Think back to the 1980's when the automatic teller machine was introduced. It took quite a long time for us to get used to the idea but eventually we realised how much time it saved us. The same can be said for the mobile phone – where would we be without it today?

By nature, we are all creatures of habit, and learning something new can be quite overwhelming. But like it or not, chances are you will be forced into using technology in one form or another. Banking, shopping, Centerlink, Booking Travel, Shares & Investments – these can all be done online and due to cost savings for these businesses the trend will only continue to grow.

So how do we learn about these new computer technologies? Well there are many computer groups around in libraries & community centres that can help you get started. But what if you are unable to learn in a group situation?

Technology Training Group acknowledges that not everybody learns at the same pace. Some people learn much faster with one on one tuition in their own home and working on their own computer. Each lesson is supported with easy to follow step by step guides and in no time you will become a technology savvy senior!
