

How to install Teamviewer

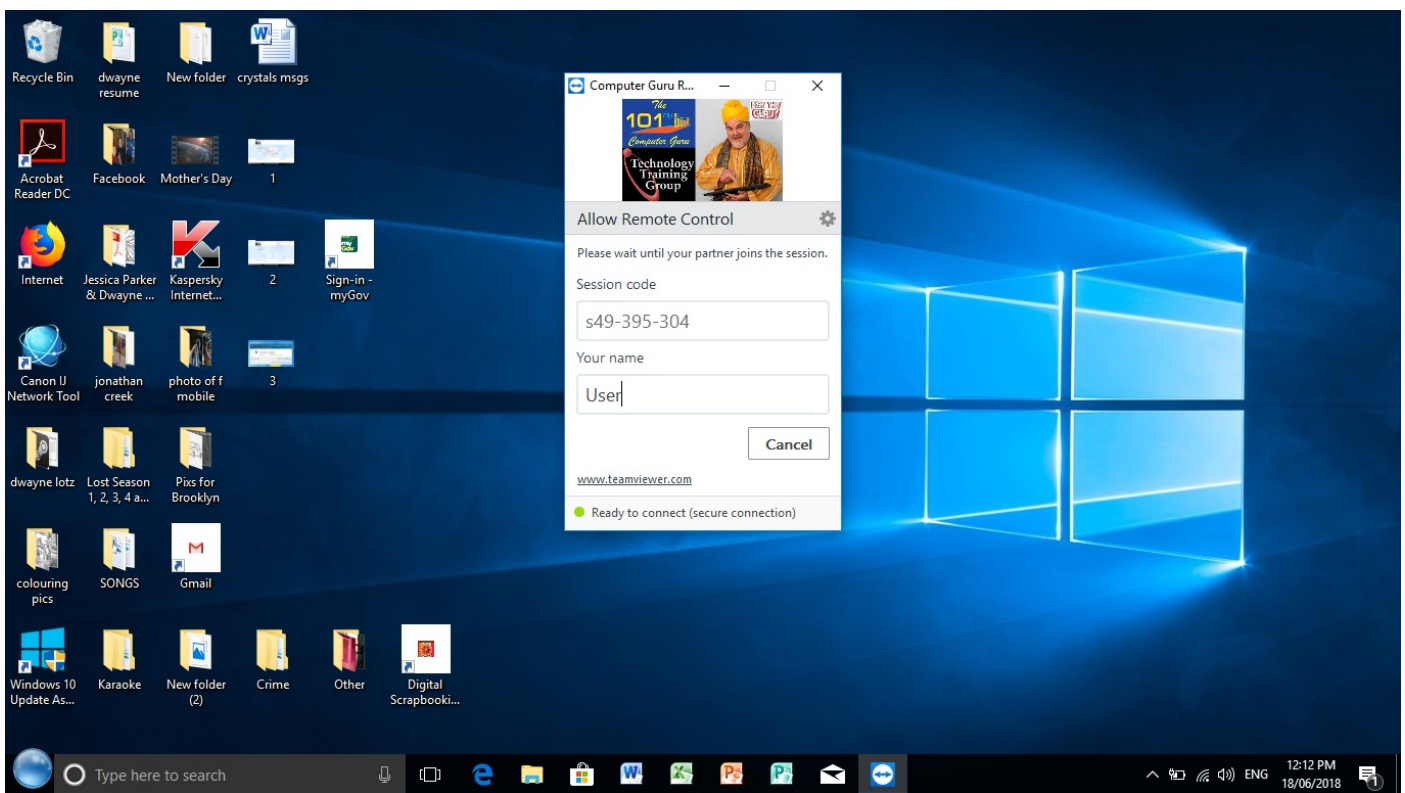

Click on "Save File"

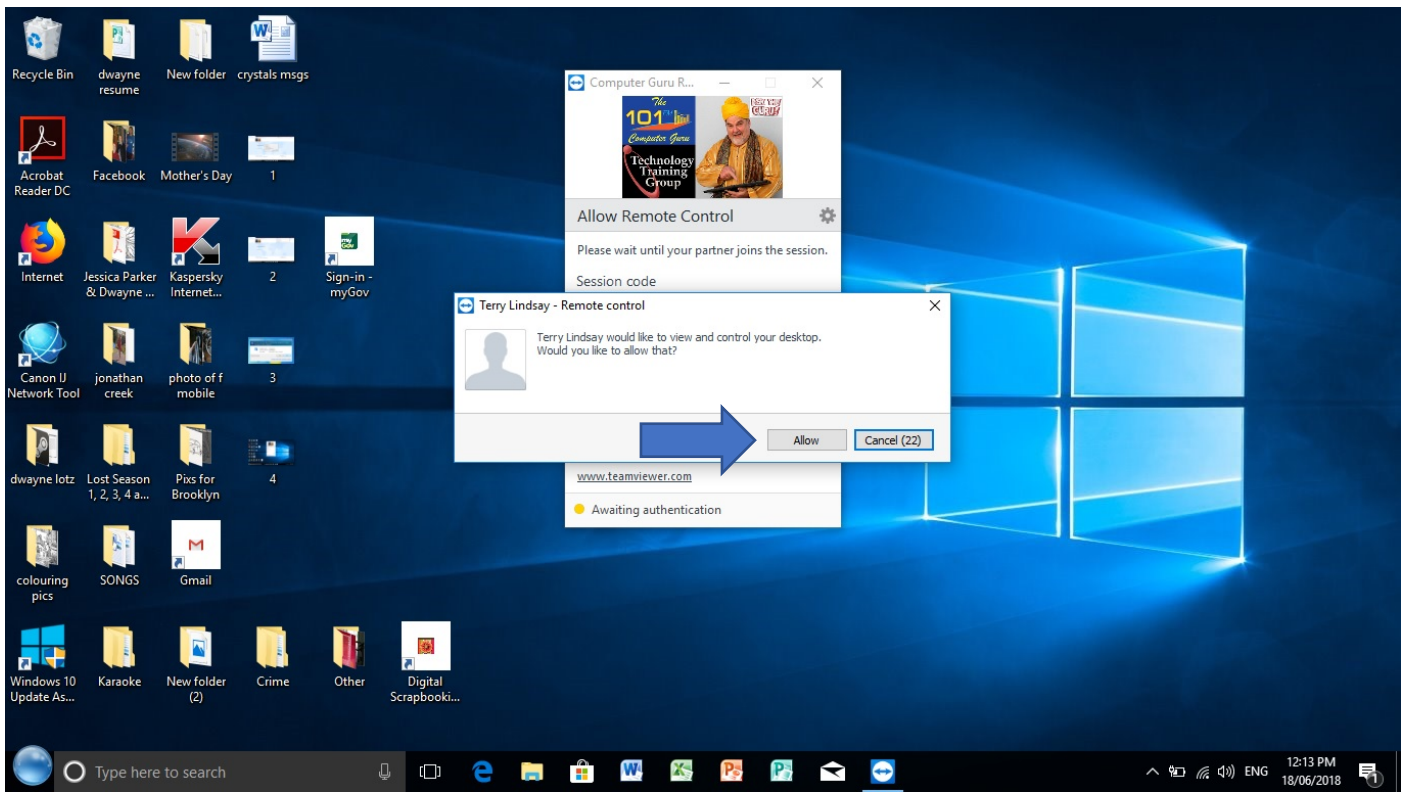

Double click on "TeamviewerQS.exe" file to run the program

Click on "Yes"

If you see the above screen then Teamviewer has been correctly installed. Teamviewer will now send a technical support request to me. I will authorise it at my end.

You will then receive a message asking you to authorise me. Click “Allow” and I will have control of your computer.

After the remote session has ended I will need your authorisation again to enable me to login in. This prevents me logging in without your permission.
